How do i reset my digitech weather station

Home > DIGITECH Wireless Weather Station with Rain Gauge and Forecasting GETTING STARTED WIRELESS SENSOR 1.Remove the battery door. 2.Insert 2 x AA size batteries into the battery compartment. Make sure you insert them the right way according to the polarity information marked on the battery compartment. 3.Close the battery door. Note: -- Once the channel is assigned to a Wireless Hygro-Thermo sensor, you can only change it by removing the batteries or resetting the unit. -- Avoid placing the sensor in direct sunlight, rain or snow. MAIN UNIT 1.Plug the power adapter to power up the main unit. 2.Once the main unit power up, it will enter normal time mode. Note: -- You can using AAA batteries for backup purpose, remove the battery door and install 3 new AAA size batteries as per the polarity information marked on the battery compartment, then close the battery door. -- If no display appears on the LCD after installing the batteries, press the [RESET] key by using a metal wire. -- To avoid the wireless sensor and main unit pairing fail, please power up the sensor(s) first, and then press [RESET] key in main unit after sensor setup. -- You may not receive the signal immediately. Due to the atmospheric disturbance, the best reception often occurs during night time. WIRELESS SENSOR SIGNAL RECEIVING 1.In normal mode, press [SENSOR] key once to start receiving the sensor signal of current on displaying channel. The signal icon will flash. For example, when CH 1 is displayed, pressing [SENSOR] key will start receive for CH 1 only. 2.The signal icon will flash until the reception succeeded. If no signal is received within 5 minutes the icon will disappear. Receiving wireless signal after manual reset or the [SENSOR] key is pressed When waiting for signals, "--" will display in the readings field Good wireless sensor signal 3. If the signal for Ch 1-8 has discontinued and does not recover within 1 hour, the signal icon will disappear. The temperature and humidity will display "Er" for the corresponding channel. 4. If the signal does not recover within 48 hours, the "Er" display will become permanent you need to replace the batteries of "Er" channel's sensors and then press [SENSOR] key to pair up the sensors of each "Er" channels again. Note: After replacing the batteries of the wireless sensor or the unit fails to receive wireless sensor signal of a specified channel. During the failed channel is displaying, press [SENSOR] key to manually receive that sensor signal again. VIEW CHANNEL OF MULTIPLE WIRELESS SENSORS 1.In normal mode, press [CHANNEL / +] key to switch the display between CH 1-8. 2.In normal mode, press and hold [CHANNEL / +] key for 2 seconds to enter autocycle mode, after a bi sounds, it will alternately displays the channels at 4 second intervals. 3.During auto-cycle mode, press [CHANNEL / +] key once to stop auto-cycle and display the current channel. 4.Using auto-cycle mode will only display the communicated channels. For example, when CH 1 and 6 have received the signal from the corresponding sensor, holding [CHANNEL / +] key for 2 seconds will only toggle the readings of CH 1 and 6. Other channels will be neglected. TIME AND CALENDAR SETTING 1.In normal mode, press and hold [TIME SET] key for 2 seconds to enter date and time setting mode. 2.Press [CHANNEL / +] or [MEM / -] key to adjust the setting. 3.Press [TIME SET] key to enter the next setting 4.The setting sequence: 12/24H hour minute second year DM/ MD month day time offset language 5.When you complete the setting, press [TIME SET] key or leave the unit for 60 seconds to return to normal mode. 12/24H setting Hour/Minute/ Second setting Year setting Month/Day setting D/M M/D Month/day setting M/ D Time offset setting 00H 01H...23H -23H...-01H 00H Language setting EN FR DE ES IT NLRU ALARM TIME SETTING AND DISPLAY 1.In normal time mode, press and hold [ALARM] key for 2 seconds until the alarm hour digit flashes to enter alarm time setting mode. 2.Press [CHANNEL / +] or [MEM / -] key to change the value. Press and hold the key for quick-adjust. 3.Repeat the above operations to set the alarm time in this order: Hour → Minute. 4.When you complete the setting of Minute, Press [ALARM] key or leave the unit for 60 seconds to return to normal mode. USING ALARM AND SNOOZE FUNCTION 1.Set the desired alarm time as described in the above section. 2.Or press "ALARM" key to display the alarm time, press it again to turn on alarm function with the alarm icon "" displayed on the LCD. 3.When clock reach the alarm time, alarm sound will start. Where it can be stopped by following operation: a)Auto-stop after 2 minutes alarming if without any operation and the alarm will activate again in the next day. b)By pressing [ALARM / SNOOZE] key to enter snooze that the alarm will sound again after 5 minutes. c)By pressing and hold [ALARM / SNOOZE] key for 2 seconds to stop the alarm and will activate again in the next day d)By pressing [ALARM] key to stop the alarm and the alarm will activate again in the next day. Note: -- The snooze could be used continuously in 24 hours. -- During the snooze, the alarm icon "" will keep flashing. TEMPERATURE FUNCTIONS 1.Press [°C / °F] key to switch between °C /°F temperature unit. 2.When the temperature is below -40°C or above 70°C, "Lo" or "Hi" will be displayed respectively. text.skipToContent text.skipToNavigation To Our Valued Victorian Customers... Jaycar stores in Victoria will be OPEN for click & collect ONLY during the 7-day lockdown period as per government guidelines. We encourage all Victorian customers to place their orders via our website for home delivery or contactless collection to help minimise contact during this time. Stores will reopen from Friday 4th June. Touch Screen Wireless Weather Station with USB PC Link XC0348 113.00 Touch Screen Wireless Weather Station with USB PC Link DISCONTINUED \$113.00 WAS \$189.00 Save \$76.00 Bulk Pricing: 1-2 \$113.00 3-5 \$113.00 6+ \$113.00 Description A highly advanced weather station with an unbeatable range of features to keep you fully updated on current and future atmospheric activity. The outdoor sensors are simple to install and will wirelessly transmit data to the base station which interprets and displays the data on the touch screen panel. You can also connect the base station to your PC through USB and upload all recorded weather data for more in-depth analysis. The sensors will read indoor/outdoor temperature, wind speed, wind chill, wind direction, dew point, humidity, rainfall and barometric pressure and is solar powered so you don't have to think about batteries. The weather tendency indicator will inform you of changing conditions based on fluctuating barometric pressure and there are programmable alarm modes for all of the recordable weather conditions so you will know if a storm is coming or if winds are too gusty for your Sunday picnic. All minimum and maximum weather values are recorded with the time and date of recording and are stored on the base station for your reference. Display unit requires 3 x AA batteries.- Solar panel for battery conservation. (transmitter requires 2 AA non-rechargeable batteries)- Use Lithium or Alkaline batteries for superior performance.Features:• Touch screen LCD panel• Weather forecast tendency arrow• Weather alarm modes for: temperature, humidity, wind chill, dew point, rainfall, wind speed, air pressure, storm warning• Time display hours, minutes, date• 100 year calendar display• Weather symbols and barometer tendency display• Perpetual calendar• Transmission range: 50m• Display unit dimensions: 230(W) x 145(H) x 35(D)mm Display, Icon, Flashing, Indoor, Software, Maximum, Outdoor, Reset, Solar, Humidity, Instruction, Jaycar, Electronics XC0348 Instruction Manual.pdf - Jaycar Electronics
